Detail:

1. Make a backup (Snapshot) of your actinic site before applying this add-on.
2. The Magic Zoom Plus for Actinic is provided in zipped format (mzforactinic.zip) the contents of which are as follows:

- magiczoomplusactinicv9r2.acd
- Read me

A valid Magic Zoom plus license key for your site will be emailed to you. Please note: The license is valid for one site only if you want to add magic zoom to other sites that you manage you will need to purchase additional licenses.

Unzip the file to a destination of your choice on your local or data disk drive.

3. Import the magiczoomplusactinicv9r2.acd import file. This will not overwrite your site it will just add the magic zoom functionality.

To import the file Open Actinic version 9 and go to:

File | Snapshot | Import Design

This will start the import wizard. Just follow the instructions and when asked select the magiczoomplusactinicv9r2.acd file from wherever you chose to unzip it to.

4. Next license the magic zoom add-on using the license generated for your site and sent to you by email. To enter the license:

Go to Settings | Site Options | Magic Zoom | MZ License key

and enter the license.

5. Insert the support layout into your "overall page layout". To do this You will first need to click the product in the "Content tree" (where you want magic zoom to appear) now click the "Design mode tab" near the top of the actinic window and then select the "Layout code tab" at the bottom of the actinic window. To ensure that you have navigated to the overall layout code for your site Use the ^ with the yellow background icon to navigate to this layout. (Keep clicking until it stops stepping to new layout code)

Now locate the </head> tag in your "overall layout" then immediately above that right-click within your design layout and select "Insert Layout" and then select "MagicZoomSupport" from the "insert layout list" then click "insert"

(Tip: type "magic" in the "list names containing" to filter the list down to just few options.)

6. Now add magic zoom layout to your product layout template to do this:

ee-scape.net Ltd

Beech House Docking Road Sedgeford Norfolk PE36 5LR w: www.ee-scape.com E: support@ee-scape.com T: 01485 579363

click the product layout in the page preview window (you may have to select: Window | restore split View layout from the menu at the top of the actinic window first) This should be a layout such as "Standard Layout using CSS" or whatever product layout you are using.

In your product layout look for the variable: `<actinic:variable name="ProductImageLayout" />` replace this with the magiczoomlayout layout by either commenting out the ProductImageLayout variable (`<!-- <actinic:variable name="ProductImageLayout" /> -->`) or by highlighting the variable and inserting the magiczoomlayout in its place.

To insert the magiczoomlayout right-click within your design layout and select "Insert Layout" and then select "MagicZoomlayout" from the "insert layout list" then click "insert"

Basic Customisation:

A) To Switch on magic zoom in the - Product details | Magic Zoom | "MZ Enable Magic Zoom" to "true" (or section or Site)

B) Select the default standard image in - Product Details | General | "Image" field in the page details area.

C) Select the standard images available for selection and viewing - Product details | Magic Zoom | MZ Standard Image 1 - 6

D) Select the corresponding large images for the zoom - Product details | Magic Zoom | MZlargeImage 1 - 6

E) The thumbnail images are automatically generated from the standard images the height of the thumbnail images can be

changed by adjusting the - Product details | Magic Zoom | MZ Thumbnail Height.

F) The Light box background can be changed in - Settings | Site Options | Magic Zoom | MZ Light Box Background colour

G) The Functionality of Magic Zoom can be switched between magic zoom and magic thumb using the - Product details |

Magic Zoom (or section or site) layout" selector.

Note: Demonstration images have been included in the directory "mz-demo-images" in your site directory for you to try.

Advanced Customisation:

This can be performed by editing the style file magiczoomplus.css.
